ANUSHA DHARAMA KATTAYA

+61 494624552 | anushadk2003@gmail.com | github.com/anushadk13 | linkedin.com/in/anushadk2

PROFESSIONAL SUMMARY

AI / Software Engineer with experience building AI-powered systems and scalable full-stack applications. Skilled in Python, React, cloud technologies, and Large Language Models. Experienced in developing AI agents, data pipelines, and automation workflows using Azure and modern DevOps tools. Strong analytical and problem-solving skills with a background in Data Science, Machine Learning, and healthcare interoperability (HL7 FHIR).

EDUCATION

M.S. Data Science **2026 – 2027**
University of Adelaide, Australia

B.E. Electronics & Communication Engineering **2021 – 2025**
Dayananda Sagar College of Engineering, India *8.6*

Intermediate (10+2) **2019 – 2021**
Masters PU College, India *99%*

PROFESSIONAL EXPERIENCE

Software Developer @ Skypoint **March 2025 – Jan 2026**
Bangalore, Karnataka (On-site)

Skills: LLM Evaluation, Hallucination Detection, HL7 FHIR, React, Python, Azure Cosmos DB, Azure Storage, Docker, Kubernetes, Full-Stack Development, Cloud Architecture

- Evaluated and benchmarked multiple LLMs for conversational grounding and hallucination detection, reducing inaccurate responses and improving reliability of AI-driven systems.
- Architected AI-powered healthcare automation workflows by integrating clinical data pipelines built on HL7 FHIR standards, streamlining interoperability across healthcare systems.
- Built and shipped full-stack analytics dashboards (React + Python) that gave healthcare teams real-time visibility into workflow performance and operational metrics.
- Designed scalable, cloud-native data solutions using Azure Cosmos DB and Azure Storage to support high-throughput healthcare workloads.
- Containerized and deployed applications with Docker and Kubernetes, cutting deployment time and improving release consistency across environments.

OPERATIONS & LEADERSHIP EXPERIENCE

Balfours ,Rundle Mall,Adelaide **March 2026 - Present**

- Demonstrated **strong communication** and customer service skills by engaging directly with a diverse, high-volume customer base, addressing inquiries and resolving complaints promptly to maintain satisfaction and trust.
- Built **team collaboration** by working closely with colleagues to coordinate daily tasks, cover shifts, and ensure seamless store operations during peak hour.

PROJECTS

AI-Powered Resume Screening & Merchandising-Style Ranking Platform (HireFlow AI)
Technologies*:Python, FastAPI, React (Vite), Google Gemini LLM, Azure App Service, Azure Blob Storage, GitHub Actions CI/CD, REST API, NLP*

- Engineered a production-grade AI resume screening and candidate-ranking engine integrating LLM-based scoring with classical NLP skill/keyword extraction to evaluate applicants against job descriptions, modeled after real-world ATS and recruiter screening workflows.
- Built a multi-criteria ranking pipeline combining required-skill match, preferred-skill match, experience relevance, seniority fit, and domain/education fit into a single published, tunable weighted scoring formula served via a FastAPI REST API.
- Built dual-portal architecture (Student and HR/Recruiter) with multi-format resume ingestion (PDF, DOCX, TXT, Markdown), backed by Azure Blob Storage for document persistence and structured JSON-schema-enforced LLM outputs for consistent scoring.
- Automated CI/CD deployment to Azure App Service via GitHub Actions across separate dev/prod environments, with a regex/NLP-based PII-scrubbing pipeline applied pre-LLM-call to reduce identity-linked bias in candidate evaluation

Personalized Product Recommendation + Dynamic Merchandising System
***Technologies*:** *Python, XGBoost, LightGBM, FastAPI, MLflow, Scikit-learn, REST API, A/B Testing*

- Engineered a production-grade personalized recommendation engine integrating 4 ML models to score and rank products in real time, modeled after industry-leading e-commerce merchandising systems.
- Built a multi-layer ranking pipeline combining purchase propensity, price elasticity, inventory pressure, and demand forecasting into a single weighted scoring formula served via FastAPI REST API.
- Generated synthetic training data of 1,000 users, 500 products, and 50K purchase events with seasonality and price experiments, backed by an in-memory feature store for low-latency serving.
- Integrated MLflow experiment tracking and feature drift detection to monitor model performance and data distribution shifts across the full ML lifecycle, with A/B testable weight configurations per business goal.

SKILLS

Programming Languages: *Python*
Frontend : *HTML5, CSS3, JavaScript (ES6+), TypeScript, React.js, Next.js, Angular (Basic)*
AI / ML & LLMs: *Large Language Models (LLMs), AI Agents, Prompt Engineering, LangChain*
Cloud / Databases: *Azure,Cosmos DB, Docker, Kubernetes, CI/CD,PostgreSQL,VectorDBs*
Security & Authentication: *MFA, Secure Token Handling*

LEADERSHIP

Member – CS Club 2026 – Present
University of Adelaide, South Australia

Member – IEDC (Entrepreneurial Development Cell) 2021 – 2023
Dayananda Sagar College of Engineering, India
